Not illustrated. 1911 Excerpt: .per square inch, of various rocks used in foundations are, approximately, for Granite 13000 to 26000 Sandstone 7000 14000 Soft sandstone 3000 Strong limestone (1000 23000 Weak limestone 3000 Hard red brick (.000 10000 Paving brick C000 13000 Portland cement concrete, 1: 3: 6, one month old. 2000 See Table I for additional information. Foundations Upon Earth. Firm Earth.--Earth which has an angle of repose of at least 27 may be considered as firm, and for foundation purposes requires little preparation other than the excavation of a trench or pit, and making the surface receiving the masonry level. From Table II it is seen that sand, gravel, and damp clay are classed as firm soils; however, these may become so saturated with water that their angles of repose will become considerably less than 27, hence precautions must be taken against too much water by draining the...

Reviews

This book is definitely not straightforward to get started on studying but extremely exciting to read. It is really simplistic but shocks in the 50 percent of the ebook. Once you begin to read the book, it is extremely difficult to leave it before concluding.

-- **Ally Reichel**

This publication is amazing. It is definitely basic but shocks in the fifty percent of your publication. You wont feel monotony at anytime of your own time (that's what catalogues are for concerning if you question me).
